

# PESTICIDE FORUM

**Tuesday 3rd November 2015, WRc Swindon**  
**FREE ATTENDANCE**

How much is the removal of pesticides costing the water industry? What is the risk to the market for pesticide products if found in the treated water supply? Could key players solve the problems, not only of today, but also of the future?

Please join us for a tripartite collaborative ideas meeting on pesticides, working together to safeguard water. This forum will bring together pesticide manufacturers, users, and regulators and the water industry to explore key issues and develop an action plan with cross-cutting projects that will ensure high quality water.
